

Policy as Code

Accelerate Deployments and Improve Security Practices

Cloud-native migrations and digital transformation are accelerating automation for every aspect of software development, including security controls. The more cloud-migrated/cloud-native applications, APIs, microservices and cloud platforms that an organization employs, the more important fine-grained, customizable, automatically enforced authorization policies become.

Decouple policy as code. This new way forward allows developers to accelerate delivery, while giving Platform teams the ability to reduce security and compliance risks globally.

Open Policy Agent (OPA), the de facto standard for Policy as Code, is widely adopted and makes it easier than ever for enterprises to define and enforce authorization policy across infrastructure and in applications.

Manage authorization policy at scale with open source and commercial products. Built by the creators and maintainers of OPA, the Styra authorization platform provides policy-lifecycle management and an Enterprise OPA that together accelerate deployments and improve security practices, without disrupting developer workflows.

Open Policy Agent

Donated to the CNCF in 2018, OPA is now a Graduated CNCF project and sets the industry standard for policy as code. OPA was created and is still maintained by Styra.

Accelerate Delivery

Streamline developer processes using OPA policy as code.

Reduce Security Risks

See policy impact before implementation and enforce policy governance through compliance and security reporting.

Manage Authorization Policy-lifecycle

Manage and maintain policy throughout its lifecycle across cloud-native environments.

Policy as Code Platform

OPA

An open source, general-purpose decision engine.

OPA Support

Professional services and training led by the creators and maintainers of OPA.

Styra Load

Enterprise OPA, built to provide resource-efficient performance for data-heavy workloads while connecting natively to your existing data sources.

Styra DAS

Context rich policy-lifecycle management for large enterprise providing accelerated cloud migration and application modernization while reducing latency and security risks.

Trusted by Large Enterprises

” We process over two million transactions per year, with at least an order of magnitude more API calls behind that. So, we can't be slowed down by long authorization decisions.”

Shayne Claussion | VP, Engineering | Extenda Retail

About Styra

- 2016 Styra Founded
- 2018 Donated OPA to CNCF
- 2019 Launches Styra DAS
- 2021 OPA Graduates in the CNCF
- 2023 Launches Styra Load, Enterprise OPA

Total Funding to Date:

\$66 million

Co-founders:

Tim Hinrichs and Teemu Koponen
